8900 Composite

Function Specific™ Design

The Trek® 8900 mountain bike is designed for the serious competitor who's aggressive riding necessitates only the best in equipment. ▪ The 8900 is built with domestically produced tubing constructed to meet our unique design specifications. It features squeeze cast aluminum lugs, forged dropouts, Answer aluminum stem, Matrix® composite handlebars and a SunTour XC Pro GT length Accushift drive train. The 8900 also features the innovative Rock Shox suspension fork which allows for faster descents with greater control. ▪ The end result is an ultra-strong bike that can take the pressures of competitive riding. Minimal weight makes for quick, smooth acceleration up the hills. Finally, the composite frame's superior shock absorption allows you to ride aggressively with minimal fatigue.

8700 Composite

Function Specific™ Design

New to our Mountain Composite line, the 8700 is manufactured using domestic composite tubes. Designed for the competitive rider, the 8700 can withstand the demands of racing and is light enough to win. ■ It features the SunTour XC Pro GT drive train and a rugged Matrix® wheel system that is at home on even the roughest terrain. ■ The 8700 will provide you with the strength for all out riding, the minimal weight for quick acceleration, and the shock absorption to make it enjoyable.

Mountain Aluminum

Mountain competition bicycles that combine maximum strength with minimum weight for peak performance.

Our leadership in mountain bike design is exemplified by our bonded aluminum mountain bikes. ■ We use premium aluminum alloys like Easton 7000-E9 and Alcoa 6061-T6 to guarantee superior strength and minimal weight. These double butted aluminum tubes are then bonded to Trek's exclusive squeeze cast aluminum lugs to assure precise alignment of the frame and increased rigidity for better performance. ■ This year our mountain bikes sport significantly larger headsets which are designed to be stronger, distribute stress better, and create a stronger overall frame. We've also increased the blade size of our forks to provide a tighter more responsive ride. These changes provide a noticeable improvement in both handling and performance. ■ All our aluminum mountain bicycles now feature exclusive Triple-Tech™ top tube cable routing which reduces the possibility of dirt clogging the gear and brake cables and simplifies maintenance. ■ Finally, our frame geometry, with 71° head and 73° seat tube angle, produces an aggressive combination of frame strength, hill attacking power, and reassuring control on the descents. ■ Off-road terrain can be very tough. These bicycles are designed to be tougher.

8500 Aluminum Mountain Competition

Function Specific™ Design

The 8500 is the pinnacle of aluminum mountain bikes. An aerospace bonding process and double butted Easton 7000-E9 tubing result in a strong and light frame. Shimano Deore XT components, the Tange Super Big Fork, and the Matrix® Z-Axis™ tire system provide smooth and dependable operation even under the toughest of conditions. ■ The 8500 delivers the peak performance needed in competitive situations to charge the turns, pound the bumps, and pull away from the pack.

8000 Aluminum Mountain Competition

Function Specific™ Design

The 8000 is a competitive bicycle that features Easton 7000-E9 tubing, the Tange Super Big Fork, Shimano Deore DX components, and the Matrix® Z-Axis™ tire system. This combination creates a strong, light bicycle that responds to the demands placed upon it. ■ The 8000 is strong enough to handle the extreme abuse that is common in competitive cycling. And it is light enough to put you in the lead and keep you there.

6000 Aluminum Mountain Competition

Function Specific™ Design

The 6000 is the latest entry in our aluminum line and is perfect for the rider looking for real value in a performance cycle. The 6000 is made of Alcoa 6061-T6 aluminum alloy and features the Trek® Cruise Control™ fork for smoother handling. The SunTour XC-LTD group drives the Matrix® Single Track™ wheel system. ■ The 6000 offers the kind of cycling experience you would expect from a Trek aluminum mountain bike. The light weight and strength make it a top performer. The price and quality make it a top value.

Single Track™

High performance bicycles for the serious off-road enthusiast.

Trek's Single Track series remains a front runner in mountain bike performance. ▪ To stay in the lead, our Single Track bicycles now feature our new Optimal Dimension tube design. ▪ Our research has proven that as we increase the diameter of a tube, while decreasing the wall thickness, we create a stronger, stiffer tube that weighs less. This is the principle behind our new O.D. technology. ▪ With this design, our Single Track bicycles provide maximum strength and rigidity at a minimum weight. This gives the frame the toughness that is needed when pounding over rough terrain and the rigidity necessary for efficient transference of energy from your legs to the trail. ▪ Geometry also plays an important role in the overall performance of the Single Track. The assertive geometry of the Single Track, with a 71° head and 73° seat tube angle, creates a rigid, highly responsive frame which allows you to aggressively attack the turns, hills and descents. ▪ All our Single Track bicycles now feature exclusive Triple-Tech™ top tube cable routing which reduces the possibility of dirt clogging the gear and brake cables and simplifies maintenance.

850 Antelope Performance Cro-moly

Function Specific™ Design

The Antelope series is designed with demanding all-purpose use in mind. They have the characteristic strength of mountain bikes to handle rough terrain and potholed roads. They also have the lessened rolling resistance of road cycles which makes for quicker acceleration, easier hill climbing and smoother coasting. ■ The 850 is a great combination of off-road performance and value. This double butted Cro-moly frame is equipped with SunTour XCE components for smooth and dependable performance. It is a tough bicycle that will feel at home on both rolling trails or the roughest of terrain.

800 Antelope Sport Trail Cro-moly

Function Specific™ Design

The 800 is ideal for both town and trail riding. This value priced bicycle, with its Cro-moly frame and easy rolling wheel system, is ideal for riding around town and then taking a few off-road shortcuts home. The special geometry and higher rise of the handlebars create a more upright riding position which offers many people a more comfortable ride. The 800 is perfect for those looking for an affordable bicycle that offers stable and reliable performance. It is offered in a wide range of sizes from 15" to 24" including a women's 17" and a 24" wheel model. This means that everybody can get in on the fun.

The 7900 is the newest member of the Multi-Track line and it's aluminum design reveals that it is built for speed. It's innovative features and geometry allow that speed to be used on both the road and the trail. The Easton 6061-E9 construction and Shimano Deore DX group provide quick and reliable performance with a minimum of effort. The upright riding position and Matrix® Multi-Track tires further add to the comfort and enjoyability of this bicycle.

750 Multi-Track™

Function Specific™ Design

The 750 is a sport bicycle designed for comfort and fun. This double butted Cro-moly frame is driven by newly upgraded SunTour XCE components. The 750 rides smoothly with Matrix® Multi-Track tires which are mounted on durable Matrix® Titan Tour hard anodized rims. Finally, the upright riding position delivers maximum comfort without sacrificing rider efficiency. ▪ This bicycle will provide you with easy rolling and long-lasting performance whether your daily ride takes you along roads, trails, or a little of both.

720 Multi-Track™

Function Specific™ Design

Comfort was the main concern when designing the 720. Its geometry and handlebars create a riding position that allows the cyclist to sit upright for increased comfort and reduced fatigue. The SunTour XCT components mean effortless shifting which is important for an enjoyable ride. The Matrix® Multi-Track tires are smooth rollers that make hill climbing much easier and also lessen the effort needed to maintain speed on the flats. ■ When you are pedaling around town it's good to know that you can depend on your bicycle for a fun, worry free ride.

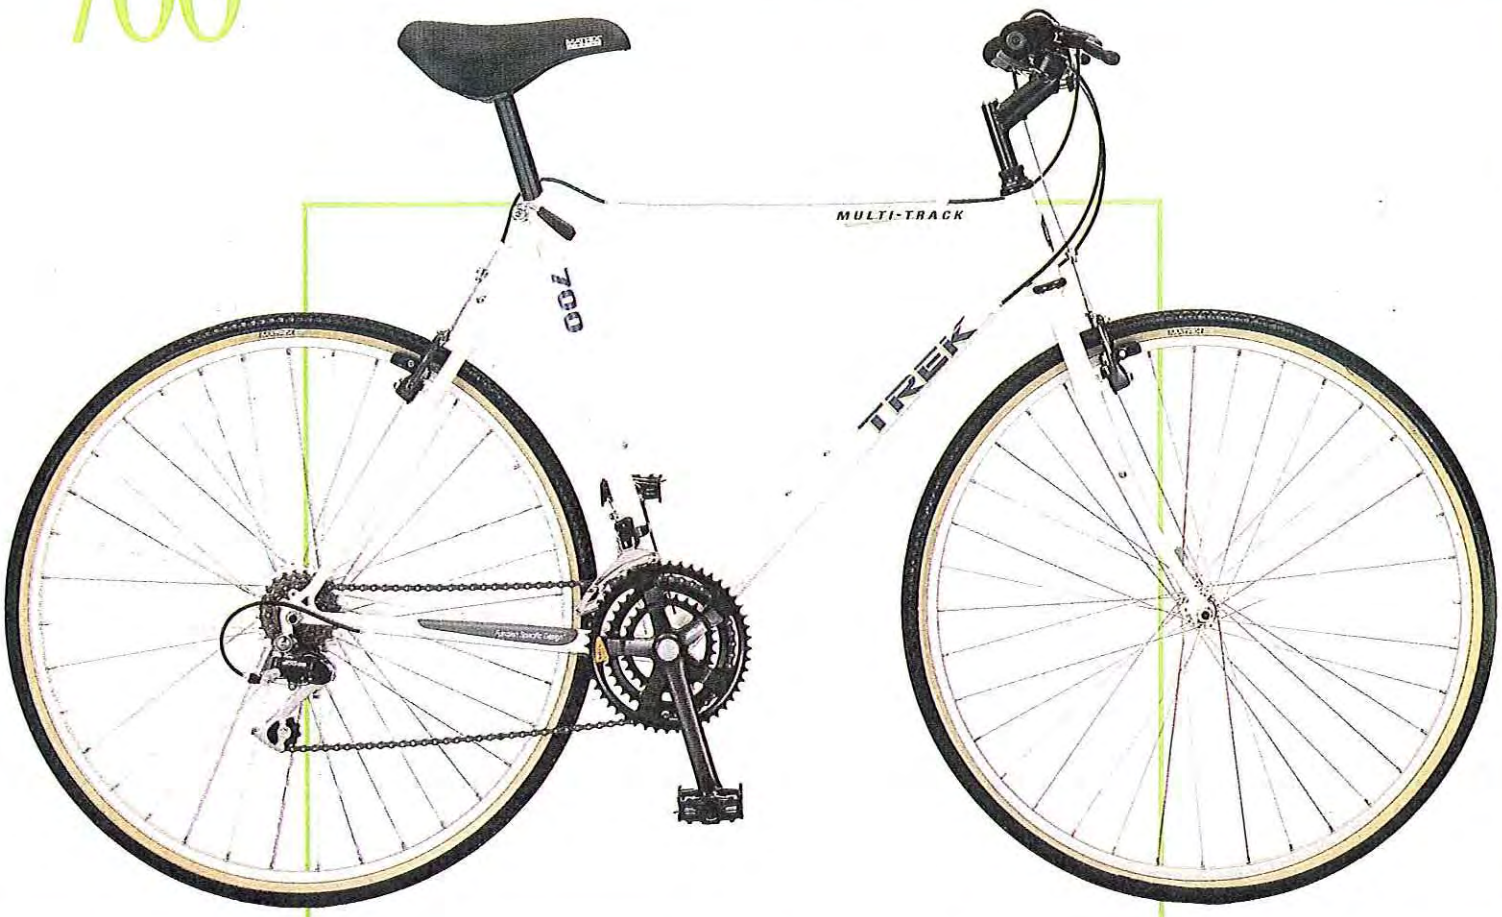
700 Multi-Track™



Function Specific™ Design

The 700 Multi-Track is the bicycle for pleasurable riding and top value. Driven by the Shimano 200GS Rapid Fire, this bicycle operates smoothly and consistantly so all you need to think about is the enjoyment of the ride. The upright riding position of the 700 is very comfortable while the frame configuration is highly stable for easy control. The low rolling resistance of this bicycle means less effort is needed to build and maintain speed. ■ The 700 is the ideal bicycle for those in search of smooth performance, maximum comfort, and excellent value.

2500 Composite

For the greatest competitive edge look to the 2500. A full seven tube composite design makes the 2500 both extremely strong and incredibly light. With Shimano's Dura Ace 8-speed SIS with Hyperglide and a minimal weight, this bicycle is an excellent sprinter and hill climber. Superior rigidity means a highly efficient transfer of energy for maximum power. Finally, the shock absorption of our composite design increases comfort and reduces rider fatigue on long rides. ▪ The 2500 is a cycle that has all the characteristics of a consistant race winner.

2300 Composite Competition

This road racer balances carbon fiber main tubes with aluminum alloy stays and fork to provide a strong, efficient, yet comfortable ride. This ultra-light frame is equipped with Shimano's Ultegra SIS with Hyperglide to provide smooth performance under even the most extreme pedaling loads. ▪ This combination results in a high performance cycle that has the quickness, responsiveness, and comfort which makes it great for road racing and triathalons.

SIZES	47, 50, 52, 54, 56, 58, 60 and 62 cm
FRAME/FORK	True Temper Graphite Epoxy/Bonded Aluminum
HUBS	Shimano Ultegra, 32 hole w/QR
RIMS	Matrix ISO-C II, hard anodized
TIRES	Matrix CD-4, 700 x 25C
DRIVE TRAIN	Shimano Ultegra SIS
BRAKESET	Shimano Ultegra Super SLR
FREEWHEEL	Shimano Hyperglide 13-21, 7-speed cassette

Shown in Composite main tubes and Bright Green and Bright Yellow with Bright Green on Silver and Yellow.

Function Specific™ Design

2100 Composite Competition

The 2100 is the latest addition to our composite line. It proves that high performance can be affordable. The 2100 features a 3 tube graphite epoxy construction which is coupled with heat-treated aluminum alloy stays and fork. ■ Driven by the Shimano 105 SC group, the 2100 is a very light cycle designed to leave the competition behind, while the rigidity makes for efficient pedaling to keep them behind. Perhaps most importantly, the incredible strength of the 2100 provides the long-lasting performance that makes it such a great value.

1420 Aluminum Performance

The 1420 is a unique bicycle that can only be classified as a performance touring cycle. It's double butted, bonded aluminum frame is designed to be both strong enough for touring loads and also light enough to cover a lot of road quickly. It is equipped with the Shimano Deore DX SIS drive train with a triple crank supplying the gear range needed when loaded down on tough hills. ■ The strength, minimal weight, and rigidity of the 1420 makes it a great choice for both performance and tour cycling.

1200 Aluminum Performance

The 1200 is Trek's most popular aluminum road bicycle. It features a double butted, bonded aluminum construction which results in a strong, stiff, but very light frame. It is equipped with a Shimano RX-100 SIS drive train and Matrix® ISO-C II rims. This is a bicycle that delivers the acceleration, speed, and durability needed for riding at your best.

Function Specific™ Design

1100 Aluminum Performance

This cycle is designed for fast paced performance and touring. The internally lugged and bonded aluminum frame is carefully engineered for maximum strength and minimal weight. And the 1100 is driven by SunTour Edge components and a triple crank for a smooth, wide range of performance. ■ This is a bicycle of minimal weight for quick performance, but it also boasts the strength and rigidity needed for hard, fast cycling.

Function Specific™ Design

1000 Aluminum Performance

The 1000 offers aluminum performance at a value price. The frame consists of double butted aluminum tubes which are bonded to our exclusive investment cast lugs. This construction results in a light, strong, and precisely aligned frame. Combined with the SunTour Edge SS Accushift drive train and a Matrix® wheel system you have a cycle that promises smooth performance. ■ The 1000 is a bicycle that offers a quick, comfortable ride at a comfortable price.

520 Cro-moly Touring

Trek's Road Cro-moly bicycles are carefully crafted bicycles that go a long way in performance. Their brazed Cro-moly construction results in a strong, rigid, precisely aligned frame that offers long-lasting quality, fun and value. ■ The 520 is designed with long distance touring in mind. The special geometry of the frame creates directional stability while loaded and offers ample clearance for panniers and fenders. The Shimano Deore DX components and the triple crank assure smooth operations under the stress encountered when touring. ■ The 520 Cro-moly is a quality cycle that will provide you with long-term cycling performance and enjoyment.
